The Digital Signal

Processor Market The

DSP market is very

large and growing

rapidly. As shown in

Fig. 28-14, it will be

about 8-10 billion

dollars/year at the turn

of the century, and

growing at a rate of

30-40% each year.

Digital Signal Processing

The first step is usually to convert the signal from an analog to a digital form, by sampling and then digitizing it using an analog-to-digital converter (ADC), which turns the analog signal into a stream of numbers. However, often, the required output signal is another analog output

signal, which requires a digital-to-analog converter (DAC).

Digital signal processing with Octave

Then again, some of the best signal processing is done by humans. If you don't like Octave, you might try Scilab, another Linux package that is similar. There's also Freemat, Sage, and Spyder.
