The history of virology - the scientific study of viruses and the infections they cause - began in the closing years of the 19th century. Although Louis Pasteur and Edward Jenner developed the first vaccines to protect against viral infections, they did not know that viruses existed. The first evidence of the existence of viruses came from experiments with filters that had pores small ...

Baltimore classification is a system used to classify viruses based on their manner of messenger RNA synthesis. By organizing viruses based on their manner of mRNA production, it is possible to study viruses that behave similarly as a distinct group. Seven Baltimore groups are described that take into consideration whether the viral genome is made of deoxyribonucleic acid or ribonucleic acid, whether the genome is single- or double-stranded, and whether the sense of a single-stranded RNA genome
