To stop the Apache server, type the following command: `sudo systemctl stop apache2` To start the Apache server, type: `sudo systemctl start apache2` To stop the service and start it again, type: `sudo systemctl restart apache2` If you are making configuration changes, you can reload Apache without dropping connections. Type the following command:

Apache Basics: Installation and Configuration ...

Cause: This is quite a common issue on freshly installed Apache servers. When Apache starts, it reads the configuration files and notices an unknown directive "SSLEngine". This is caused by the fact that the server's basic configuration does not have `mod_ssl` module installed/enabled which is responsible for creating and serving SSL connections. Solution:

'Invalid command 'SSLEngine' error on Apache - SSL ...
